

CZECH CULTURAL GARDEN

1. Installing the conduit to remote light location (Masaryk statue light)

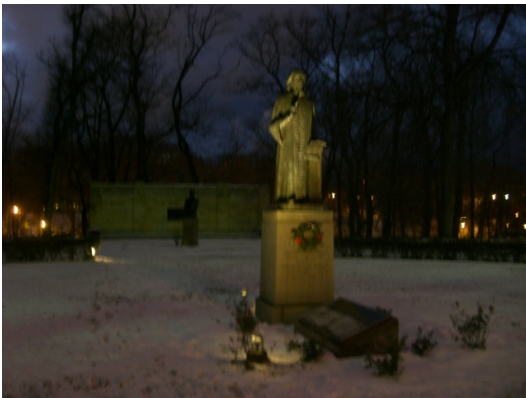

3. Batteries and the control system is installed inside the solar collector box.

SOLAR LIGHTS INSTALLATION

2. The solar panel with batteries and control system is placed in open, obstructed area. Rose bushes and holly shrubs are planted around to conceal the installation. LED luminaries are also concealed by the landscaping. The shrubs in the photo are new, and will grow to provide more visual screening.

The Result:

Night time illumination: Komensky upfront turned on and Masaryk and ornamental wall in the back turned off.

Same photo as to the left with the main light (Komensky) shut off, and back wall and Masaryk statue lighted to illustrate the difference.
